

The Skate Plate

Looking for an alternative to grease for lubricating your fifth wheel? Why not eliminate the plate surface lubrication altogether with the **Skate Plate**. The **Skate Plate** is a greaseless upper coupler plate that attaches to the underside of the trailer. **Skate Plate's** proprietary, high-grade urethane formulation provides a very slick and durable surface that eliminates the need to grease the plate of the fifth wheel (lubrication of the locking mechanism is still required). **Skate Plate** provides uniform and constant lubrication, improving steering and handling and reducing tire wear. Since **Skate Plate** is attached by welding - rather than mechanical fasteners like bolts or screws - there is no fear of it warping or falling off.

Install a **Skate Plate** and enjoy the following benefits:

- Permanent Lubrication – better steering and handling; reduced tire wear
- High-Grade urethane formulation—excellent wear and lubricity
- Reduced time and money associated with fifth wheel lubrication
- Quick, easy installation (less than 30 minutes); welded on plate stays in place
- Improved safety – with predictable trailer response
- Much cleaner operation – no more steam cleaning of fifth wheel, grease contamination of electrical connections or costly grease disposal
- Elimination of fifth wheel grease is great for environment
- Less wear on fifth wheels and upper coupler plates
- Reduced maintenance costs and improved productivity – no grease means easier inspection and improved shop productivity
