LifeLast liner systems protect your tanks

This tanker is protected with a LifeLast Liner system to stop corrosion and rust. Is yours?

Water Tankers experience a tremendous amount of electrolysis and corrosion from doing what they do day in and day out...just holding water! They rust when left empty. You just can't win, can you? YES YOU CAN! Simply have ICS install a spray-in polyurethane liner system and end all those corrosion and electrolysis problems!

Coated walls won't corrode

Our liner systems are sprayed into your water tanker and become part of the piece of equipment for life. A LifeLast liner will prevent your expensive tank from corrosion for many, many years to come. Our liner will stop the pitting caused by electrolysis indefinitely. There is no reason anymore to let these destructive forces destroy your equipment. Doesn't your expensive equipment deserve this kind of protection?

WATER TANKERS PROTECTED FROM ELECTROLYSIS AND CORROSION WITH A SPRAYED IN LIFE LAST LINER BY INNOVATIVE COATING SOLUTIONS, INC.
